

4.NBT.5 Multiplication problem solving

I can multiply multi-digit numbers: in word problems

LINGO

multi-step word problem

A word problem that includes two or more steps to solve for the final answer.

Order of Operations

Rule to follow to solve problems in a specific order

P	()	Parentheses
E	\times^*	Exponents
M	\times	Multiplication and Division
D	\div	
A	$+$	Addition and Subtraction
S	$-$	

HOW

STEP 1 $43 \times 6 - 4 \times 38$
258 152

STEP 2 $258 - 152$

Final answer _____

First, multiply.

Then, subtract.

PRACTICE

$78 \times 6 + 126 - 3 \times 148$

$156 + 249 \times 3 - 6 \times 78$

$56 + 39 \times 4 \times 3$

HOW

PRACTICE

Juan has 38 baseball cards in his collection. Evan has 6 times as many cards as Juan in his collection.

How many baseball cards does Evan have in his collection?

Final answer _____

Maria does 18 sit-ups. Natalie does 5 times as many sit-ups as Maria. Natalie concludes that she has done 72 more sit-ups than Maria.

Is Natalie's answer reasonable? Explain.

Final answer _____

James is raising money for charity. He collects \$78 in week 1. He collects 3 times as much money in week 2 as he did in week 1. He collects \$92 in week 3. He concludes that he has raised a total of \$326.

Is James's answer reasonable? Explain.

Final answer _____

On Wednesday, 538 people attend a play. Three times as many people attend the play on Saturday as did on Wednesday. Let n represent how many more people attend the play on Saturday than on Wednesday.

Final answer _____
